Dashboards and decision aids to support management and governance objectives.

Architecture information capture will be based on the standards being developed by:

1. Architecture Ontology being developed by an International consortium – IDEAS Group.
2. Domain Meta Model (DMM) being advanced by IDEAS, DOD, MOD, NATO and DHS.

The integration of these information standards is currently underway in a collaborative effort between OMA, UIDM Group, IDEAS, DOD, MOD, NATO and others.

Standardized architectural views and viewpoints have been adopted to enable consistent and deliverables can be developed and shared. Guidance on their use will also be provided.

The standards based set of architectural views and viewpoints have been mapped to standards based modeling techniques that support effective life cycle management of ESMI capability and multiple options on tool support.
